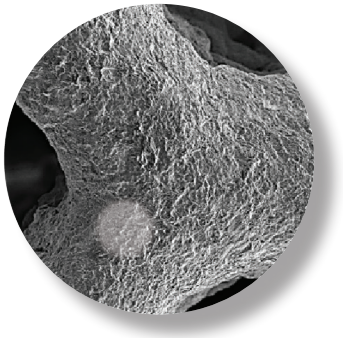
Systematic Titanium
PORES

300X



Uncompromising
MACROSURFACE

10,000X

7µm Surface
MICROSURFACE

Pillars of NEXXT MATRIXX® Technology:

1. Varied pore array of 300, 500, and 700µm designed to support vascularization and osteogenesis.[1,4,5]
2. 7µm surface roughness designed to increase osteoblast differentiation, production of angiogenic factors, and surface osteointegration.[2,3,6]
3. 75% porous, open titanium architecture developed for greater surface area and nutrient exchange, leading to increased volume for potential bony in-growth.[4,5,6]
4. Modulus of elasticity engineered to be comparable to PEEK devices leading to a more physiological product.[6]
5. 700µm A/P and lateral lattice geometry designed to provide robust radiographic imaging unimpeded by reducing overall titanium material and device density.[6]

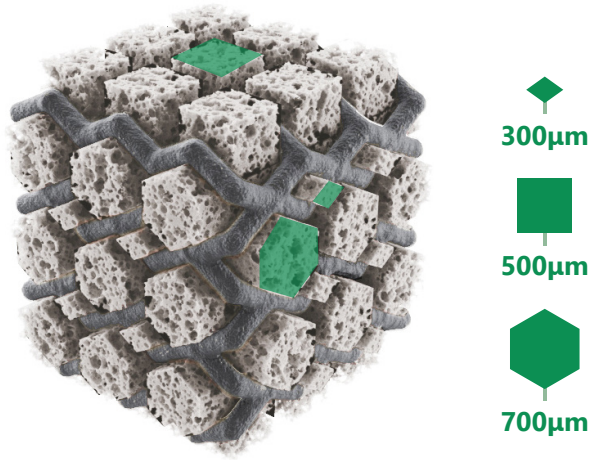


Image represents potential volume for bony in-growth

Studies referenced for the foundational design of NEXXT MATRIXX®

1. Karageorgiou V, Kaplan D. Porosity of 3D biomaterial scaffolds and osteogenesis. Biomaterials. 2005;26(27):5474–91.
2. Olivares-Navarrete R, Hyzy SL, Slosar PJ et al. Implant materials generate different peri-implant inflammatory factors: poly-ether-ether-ketone promotes fibrosis and microtextured titanium promotes osteogenic factors. Spine. 2015;40(6):399–404.
3. Olivares-Navarrete R, Hyzy SL, Gittens RA, et al. Rough titanium alloys regulate osteoblast production of angiogenic factors. Spine J. 2013;13(11):1563–70.
4. Ponader S, von Wilmowsky C, Widenmayer M, et al. In vivo performance of selective electron beam-melted ti-6al-4v structures. J Biomed Mater Res A 2010;92A:56–62
5. Li JP, Habibovic P, et al.: Bone ingrowth in porous titanium implants produced by 3D fiber deposition. Biomaterials 28:2810, 2007.

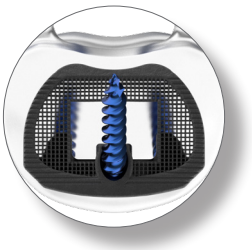
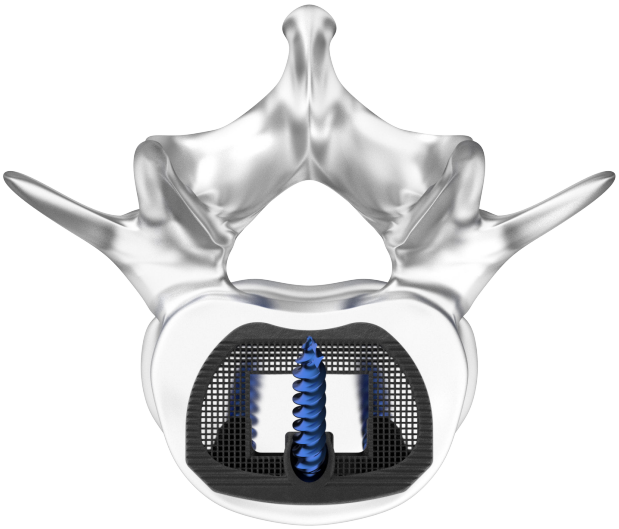
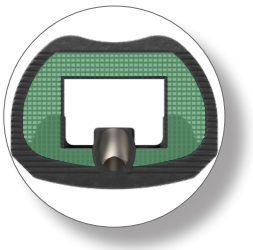
PRODUCT FEATURES

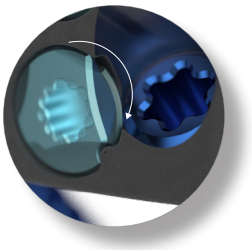


Anatomically matched profile
for appropriate endplate coverage and placement on apophyseal rim for stability





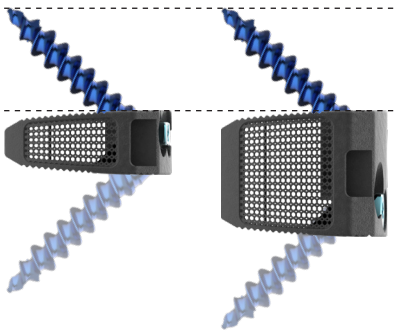
Ample graft window
balanced with lattice landscape to create environment for bone growth



Integrated one-step turn lock
feature to prevent Screw backout

Self-tapping Screws
designed with tip-to-head thread pattern for cancellous and cortical bone fixation

Optimized location of Screw Pockets
to allow for consistent bone purchase for each Screw regardless of Cage height.

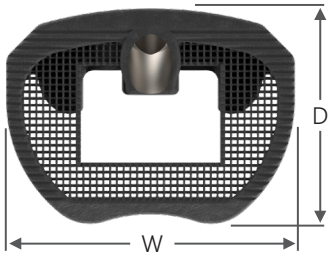


Multiple Insertion Instrumentation Options
to accommodate varying patient anatomies.

CAGE SPECIFICATIONS

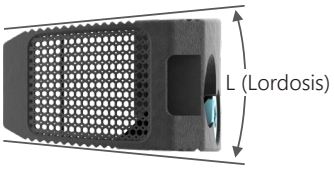
Footprints

24D x 32W, 27D x 36W, and 30D x 40Wmm



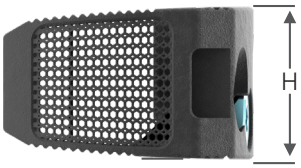
Lordoses

8°, 14°, 20°, and 25°*



Heights

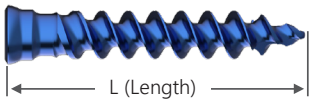
10, 12, 14, 16, 18, and 20mm*



SCREW SPECIFICATIONS

Lengths

20, 25, 30, and 35mm



Diameters

5.0 & 5.5Ø
